

Supplementary material - DublinCity: Annotated LiDAR Point Cloud and its Applications (#644)

In the supplementary material of the DublinCity project, we aim to provide additional information about the LiDAR point cloud labelling. Also, the results of image-based 3D reconstruction are presented that was mentioned in the paper. Besides, footage provided in the attachment to visually demonstrate the labelled dataset. In the video, each element in all classes is randomly colouredised for better preception.

Labelling LiDAR point cloud

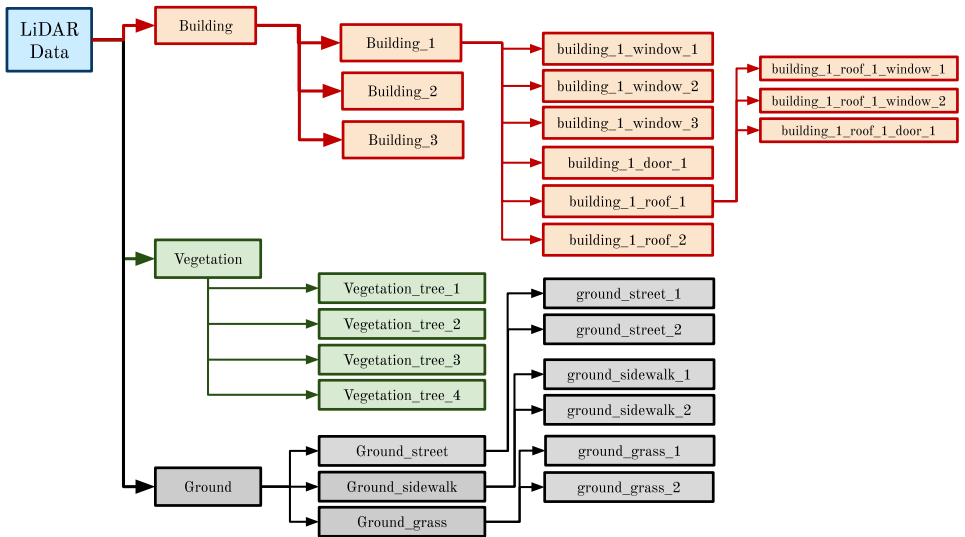

Figure 1: Labelling Order

Labelling procedure was described in the paper. In Figure 1, the hierarchy of classes and the naming orders are demonstrated.
